

Drainage Studies

Hampton Arroyo - Kokopelli Subdivision Drainage Study

Study awarded to AECOM. First public meeting was conducted on February 25, 2016 (presentation available on city website). Two more public meetings will be conducted in April and May. Final document due late June 2016. Final product will identify mitigation alternatives (limited design). Next step will be selecting mitigation alternative(s) and developing full design and seeking mitigation funding. Study was 100% City funded at \$132,000.

Engineering studies have been completed and a public meeting was organized. The storm of 8/26/15 has been identified as year 500+ event. The study update was presented in a public meeting April 21 that attracted 57 concerned citizens. Maps were shown to the public which indicate the expected water flows during the 25- and 100- year storm events. Computer modeling of alternative remedial measures for Kokopelli and Blanco are complete and have been presented at the public meeting held Sept 16 at City Hall. The public meeting held Sept 16 at City Hall was very successful. Expecting 30% engineering plans soon to close the study out.

Blanco Arroyo Study

Study awarded to AECOM. First public meeting scheduled for March 16, 2016. Two more public meetings will be conducted in April and May. Final document due late June 2016. Final product will identify mitigation alternatives (limited design). Next step will be selecting mitigation alternative(s) and developing full design and seeking mitigation funding. Study was 100% City funded at \$116,000.
