

RFQ 2025-873
Parking Lot Engineering & Design
Addendum #1

- 1. Does the City intend the scope to include Geotechnical design for the parking lots?**

Given the heavy use over the years and dense compaction of the soils in all locations, I suspect geotesting won't be necessary. However, that can be put in as an alternative.

- 2. Is a topo survey available? If not, will one be required?**

No topo survey available. Engineer may need to site visit and determine.

- 3. Does the City anticipate detailed grading plans as part of the design, or will grading follow existing with paving and striping added?**

No detailed grading plans, we anticipate a base course and paving. Lane/parking striping not necessary as that will likely be done in-house.

- 4. Will stormwater features or runoff analysis be included in the design?**

If warranted, it may have to be included depending upon field review and directionality of sheetwash/drainage.
